

## CrossTec SchoolVue v9 Features

Save Printing Costs

CrossTec SchoolVue now features a powerful Print Management tool allowing total control over printer usage within the classroom. Students can be prevented from printing anything, be assigned page limits per lesson, or require teacher authorisation.

The Print Management feature supports multiple printers within a classroom, prevents the addition, deletion or modification of existing printers and provides printing usage summaries for the class.

Works With Wireless

Wireless support in CrossTec SchoolVue has been extended to offer improved performance over wireless access points and the inclusion of class lists. To complement this, a new class list creation tool is now provided to allow for off-line preparation of class lists.

The latest version of CrossTec SchoolVue also features a Student Locator. Wireless student laptops can be located across a WAN, current network details can be identified, thus ensuring easy connection from a teacher's class list. CrossTec SchoolVue is now provided with full support for Windows Vista in addition to its existing platform support.

Windows Vista Support

CrossTec SchoolVue is now provided with full support for Windows Vista™ in addition to its existing platform support.

Eliminate USB Drive Issues

CrossTec SchoolVue v9 offers flexible control of USB and CD drive use which will protect you from unintended files, such as malware, being introduced to your network. Device Control also protects data from being copied to removable drives.

SchoolVue v9 not only provides an on/off switch for drives but also provides you with additional settings. For example you can set it up so data can still be viewed on a USB Memory Stick or CDROM, but can be set to prevent downloading files from them.

See What Students are Typing

New to CrossTec SchoolVue is Keyboard Monitoring. Designed to be used in conjunction with application control, this feature provides teachers with real-time insight into student activity and topic understanding. During a lesson the teacher can monitor the entire class and quickly and easily observe their typed content and activity levels.

The keyboard monitor also provides a perfect monitoring tool when students are online in forums or search forms.

## CrossTec SchoolVue v9 Product Enhancements

Better URL Blocking & Control

The Internet monitoring and control features of SchoolVue have been further enhanced providing internet control across a wide range of browsers and the inclusion of partial URL filtering.

Teachers can now provide access for students to selected pages on a website, but restrict access to other pages at the same site.

In addition, the latest version of SchoolVue features a new “SafeSearch” feature, which overrides the search settings for most leading search engines and prevents inappropriate content being returned within search results.

Added Student Assessment Features

The Students Testing modules have been further enhanced, with a new question and test designer component, easy addition of testing resources via desktop “drag and drop” and a streamlined test player with improved student feedback.

Monitor Student Instant Messaging

SchoolVue extends its application control features with the availability of Messenger Monitoring.

In addition to the ability to prevent Messenger applications running within the classroom, SchoolVue also provides real-time monitoring of specific Messenger applications. The teacher gains a real time view of chat activity and content.

The Messenger monitoring component supports a range of messenger applications including MSN, Live Messenger, Yahoo and AOL messengers. Support is also included for “Jabber” based messengers including PSI, Coccinella, LinQ, Mango, Tkabber, Wija, Spik and Wannachat.

Messenger monitoring is not available for applications using encrypted protocols.

Information Bar Provides Students with More Class Information

SchoolVue now features a Student Information bar, neatly located at the top of each student screen. This can be set to be visible or to auto-hide.

The information bar provides feedback to the student on the current lesson, time remaining, current websites and applications that are available, the status of messenger and keyboard monitoring and quick access to request help.

All of the features included on the information bar can be customised by the teacher.

## CrossTec SchoolVue v9 – Other Updates

---

Tutor on Minimize

The Tutor Toolbar remains accessible even when the main application has been minimised, providing quick access to key features during a lesson.

Screen Annotation / Pointer

The Screen annotation tools can now be used outside of the SchoolVue Tutor program, and where their functionality could benefit a presentation with a projector or OHP.
